ROI 2019–20 Request for Proposals

Improving Diversity & Inclusion in Radiation Oncology

Deadline for Letters of Intent (required for all applicants): October 28, 2019
Deadline for Project Proposals (by invitation only): January 31, 2020

Purpose and Background

Radiation oncology research has yielded significant improvements in cancer care and outcomes for many patients. However, numerous studies document that disparities persist for certain populations both in terms of patient care and representation in the radiation oncology workforce. Increased cancer incidence, decreased access to care, and higher mortality are seen in people from vulnerable socioeconomic groups, certain racial and ethnic minorities, and those who live in geographically isolated areas. Many of the same groups that experience cancer health disparities are also significantly underrepresented in cancer clinical trials.* Within radiation oncology, underrepresented groups and women represent a disproportionately small part of the workforce, despite growing numbers entering medicine and biomedical research.

Research to understand the causes of disparities and to test new interventions to address them is needed. Having more diverse perspectives among those conducting research can have downstream effects on patient care, clinical trial enrollment, etc. Overall, more must be done to improve health equity and ensure that all patients have access to the lifesaving and quality-of-life benefits of radiation therapy.

* https://www.cancer.gov/research/areas/disparities

Intent

Through this RFP, the ROI is seeking innovative ideas to reduce disparities in patient care, increase participation of under-represented groups in clinical trials, and improve diversity in the radiation oncology workforce. The ROI focuses on research to heighten the critical role of radiation therapy in the treatment of cancer and identified the following topics through the National Radiation Oncology Research Needs Assessment* to form its research agenda.

- **Communication** – identifying and developing communication strategies to improve awareness and understanding of radiotherapy by referring physicians, patients and others.
- **Quality and safety** – establishing general quality indicators for radiation oncology treatment.
- **Comparative effectiveness** – conducting comparative effectiveness outcomes studies.
- **Toxicity management** – identifying best practices for management of radiation toxicity and survivorship.
- **Value** – assessing the value of radiotherapy/radiation oncology relative to other treatment modalities.
The proposed diversity and inclusion research must address one or more of the ROI’s priority topic areas. Proposals should focus on the highest impact research questions for the field of radiation oncology. Projects resulting in practical applications for radiation oncology professionals and their patients will be given priority. Knowledge derived from these studies should inform policy development or aim to improve patient outcomes in cancer treatment. Focus on one or several of the prevalent cancers is encouraged, however, the ROI seeks any proposal that would lead to important research that aims to improve diversity and inclusion in radiation oncology. Special consideration will be given to proposals that use highly innovative methodologies or are not otherwise fundable through traditional sources.

Examples of projects that would be responsive to this RFP are included below.

Example 1: Improving diversity in clinical trial enrollment in radiation oncology trials
Example 2: Recruitment and retention of women and underrepresented minorities to radiation oncology
Example 3: Development and testing of resources to improve the quality of care for patients at risk of discontinuing or not receiving radiotherapy
Example 4: Increasing access to cancer care for rural populations
Example 5: Identify and characterize social determinants of poorer radiation tumor or normal tissue outcomes and/or test interventions to ameliorate outcomes in these impacted populations

**Award Amount**

A typical budget for a project supported by this mechanism is expected to be limited to a total of $50,000 over 2 years. However, larger budgets will be considered with the firm limit that costs may not exceed $100,000. A maximum of 7% of the total requested amount can be attributed to indirect costs. Special attention will be given to projects that demonstrate efficiency and economy of resources to pursue the research proposed.

The number of grants in each funding cycle is not predetermined by the ROI. Awards are given based on application merit and availability of funds.

Grants may be approved for up to a 2-year period. Funding for the second half of the grant period is contingent upon submission and approval of an interim progress report. Projects must be completed no later than July 2022.

**Eligibility**

1. Qualified individuals from institutions and organizations in the radiation oncology (RO) community.
2. Applicants enrolled in residency programs or post-doctoral fellowships require a faculty mentor.
3. Individuals from institutions and organizations of the non-RO community who possess necessary qualifications for specified research.
4. Applications from research consortia (the same maximum overhead rate will apply to both the primary award and all subcontracts).
5. Applicants from international and for-profit institutions will be required to submit additional documentation if invited to submit a full proposal.
General Selection Criteria

Proposals for research projects will be judged by the ROI on several criteria based on scientific and technical merit. An application does not need to be equally strong in all categories to be judged likely to have major scientific impact.

1. **Overall Impact**: Likelihood for the project to lead to significant follow-on funding or initiate a new research direction that will eventually have a powerful influence on the field of radiation oncology.

2. **Significance/Importance**: Does the project address an important problem or a critical barrier to progress in the field? If the aims of the project are achieved, how will scientific knowledge, technical capability, and/or clinical practice be improved? How will successful completion of the aims change the concepts, methods, technologies, treatments, services, or preventive interventions that drive this field? The application MUST address clearly what the expected end-product is, the value of the end-product to the radiation oncology community, and how the product will be used for follow-on funding or initiate a new research direction that will benefit the broader radiation oncology community.

3. **Topic and Practical Application**: How well does the project address one or more of the ROI’s priority research areas identified in the National Radiation Oncology Research Needs Assessment? Will the project advance the personalization of radiation therapy? Are the outcomes from the project designed to have an impact on practice in the near future? Are the outcomes scalable?

4. **Approach**: Are the overall strategy, methodology, and analyses well-reasoned and appropriate to accomplish the specific aims of the project? Are potential problems, alternative strategies, and benchmarks for success presented? If the project involves clinical research, are the plans for 1) protection of human subjects from research risks, and 2) inclusion of minorities and members of both sexes/genders, as well as the inclusion of children, justified in terms of the scientific goals and research strategy proposed?

Applicants proposing observational studies are specifically referred to the following methods overview published in the *International Journal of Radiation Oncology Biology and Physics*:

5. **Innovation**: Does the application challenge and seek to shift current research or clinical practice paradigms by utilizing novel theoretical concepts, approaches or methodologies, instrumentation, or interventions? Are the concepts, approaches or methodologies, instrumentation, or interventions novel to 1 field of research or novel in a broad sense? Is a refinement, improvement, or new application of theoretical concepts, approaches or methodologies, instrumentation, or interventions proposed?

6. **Investigator**: Are the PD/PIs, collaborators, and other researchers well suited to the project? If Early Stage Investigators or New Investigators, do they have appropriate experience, training, and mentorship? If established, have they demonstrated an ongoing record of accomplishments that have advanced their field(s)? If the project is collaborative or multi-PD/PI, do the investigators have complementary and integrated expertise; is their leadership approach, governance and organizational structure appropriate for the project?

7. **Research Environment**: Would the scientific environment in which the work would be done contribute to the probability of success? Would there likely be institutional support for this project? Would the project benefit from unique features of the scientific environment, or subject populations, or require useful collaborative arrangements?

8. **Budget**: Does the budget reflect appropriate use of resources to complete the project in a timeline consistent with what has been outlined in the proposal?
How to Apply

1. **Letter of Intent – Required for All Applicants**
   Submit a Letter of Intent (LOI) by **October 28, 2019 at 5:00 p.m. ET** through proposalCENTRAL. ROI will review the LOIs and will send notifications in November about proceeding to the next step in the process of preparing and submitting a project proposal. The LOI consists of the items listed below and a separate letter is not required.

   **Cover/Signature Page**
   The Signature Page is automatically populated with data entered in the proposalCENTRAL system (title of project, applicant’s name, institution, contact information, etc.). Download the Signature Page after completing the application by clicking on the “Print Signature Page” button in the “Signature Page” section of the LOI. For the LOI, the Signature Page must be signed by the **Principal Investigator**. If the applicant is a resident or fellow, the **Faculty Mentor** must also sign this page. Upload the signed Signature Page in the “Attachments” section of the LOI on proposalCENTRAL before submitting the entire application by the deadline. A hardcopy is not required.

   **Abstract and Statement of Relevance**
   Enter a preliminary technical abstract and a statement about the relevance of the proposed research to two or more of the ROI’s priority research topics and how the research will impact practice and benefit patients. The abstract should include a description of the study question and research plan in a maximum of 500 words (up to 4,000 characters max, including spaces). The statement of relevance should be no more than 250 words (up to 2,000 characters max, including spaces). A system-generated page with these two items will be included in the application and a separate document does not need to be uploaded.

   **Principal Investigator Biosketch**
   Upload the Principal Investigator’s biosketch with selected relevant publications (following NIH format and not to exceed 5 pages) in the “Attachments” section of the LOI. The Faculty Mentor’s biosketch should also be included if the applicant is a resident or fellow.

2. **Project Proposal – By Invitation Only**
   After receiving an invitation to proceed, submit a proposal by **January 31, 2020 at 5:00 p.m. ET** through proposalCENTRAL. Proposals should contain the items below.

   **Cover/Signature Page**
   The Signature Page is automatically populated with data entered in the proposalCENTRAL system (title of project, applicant’s name, institution, contact information, etc.). Download the Signature Page after completing the application by clicking on the “Print Signature Page” button in the “Administrative & Signature Page(s)” section of the proposal. For the proposal, the Signature Page must be signed by the **Principal Investigator and Authorized Institutional Official**. Upload the signed Signature Page in the “Project Proposal Supporting Documents” section of the proposal on proposalCENTRAL before submitting the entire application by the deadline. A hardcopy is not required.

   **Abstracts and Statement of Relevance**
   Enter both a technical abstract and a lay abstract as well as a statement about the relevance of the proposed research to one or more of the ROI’s priority research topics and how the research will impact practice and benefit patients. The technical abstract should be written for a scientific audience, while the lay abstract should be a clear and concise summary for the general public and media. The technical abstract can be a maximum of 500 words (up to 4,000 characters max, including spaces) and the lay abstract and statement of relevance should be no more than 250 words (up to 2,000 characters max, including spaces) each. A system-generated page with these three items will be included in the application and a separate document does not need to be uploaded.
Proposal
Upload a brief project description (up to 4 pages, single-spaced, including figures) which contains the following information:

- A statement of the project’s principal objectives
- A discussion of significance, outcomes and impact, including the value of the end-product to the radiation oncology community
- A statement of innovation
- A description of the research plan and methodologies to be employed, including clear discussion of how data will be collected
- A plan for evaluation that will measure the outcomes of the project in terms of the purpose and objectives
- A clear discussion of next steps and dissemination strategy
- A timetable

Budget
Grant funds may be used to support project staff salaries and benefits, consultant fees, data management, supplies and other direct expenses. Include a project budget justifying specific items requested and assigning a priority to each item (not to exceed 1 page). Be sure to include details on the following items:

- Personnel - List the names and positions of all professional and non-professional personnel involved in the project, and whether or not salaries and benefits are requested. Indicate the percent effort on the project for professional personnel. The institutional base salary of an individual should not exceed the current federal salary cap of U.S. $192,300.
- Consultant fees – Give the name and institutional affiliation of any consultant and a brief description of the services to be performed.
- Equipment and Supplies – Equipment purchases are allowed with sufficient justification. List all items requested and the cost of each item.
- Travel – Describe the purpose of any travel.
- Other Direct Expenses – Itemize other expenses by major categories, such as publication costs, data management, etc.
- Indirect Expenses – A maximum of 7% of the total budget can be used for indirect expenses.

An explanation of how costs not covered by this grant, such as departmental funds or other grants, will be paid is also required. Any other grant sources of funding supporting the same scope of work must be reported to the ROI if not described in the original research proposal.

References Cited
References should be numbered in the sequence that they appear in the text (not to exceed 1 page).

Biographical Sketches
Upload biosketches with selected relevant publications for all of the key project personnel (following NIH format and not to exceed 5 pages each). This includes Co-PIs for all projects and/or the Faculty Mentor’s biosketch if the applicant is a resident or fellow.

Reference Letter
A maximum of 1 letter of reference can be submitted but is not required.

Appendices
Only include if necessary to communicate essential information, but please limit to 2 pages (e.g., excerpts from in-press papers, essential figures or other media).
3. **Proposal Formatting**

- **Font** – Use an *Arial, Helvetica, Palatino Linotype, Calibri or Georgia* face, a black font color, and a font size of 11 points or larger.
- **Page Margins** – Use at least 0.5 inch margins (top, bottom, left, and right) for all pages.
- **Page Formatting** – Single-spacing should be used and applicants are strongly encouraged to use only standard, single-column format for the text. Page numbers should be included.
- **Proposals** are not to exceed the 4-page maximum (excludes Signature Page, abstracts and statement of relevance, budget, references and biosketches).

**Submission**

Applications should be submitted electronically at: [https://proposalcentral.altum.com](https://proposalcentral.altum.com). After logging-in, click on the "Grant Opportunities" tab and select "Radiation Oncology Institute" in the "Filter List by GrantMaker" dropdown menu. Customer support with online submissions will be provided by proposalCENTRAL by email at pcsupport@altum.com, or phone at 800-875-2562 (toll free) or 703-964-5840. Customer support specialists are available Monday through Friday from 8:30 AM to 5:00 p.m. ET. For questions regarding the ROI award program, please contact Emily Connelly, Governance and Research Administrator, by email at roi@astro.org or by phone at 703-839-7356.

**Evaluation of Proposals**

All proposals are evaluated by the ROI’s Research Committee, whose recommendations are reviewed by the ROI Board of Trustees. Funding of awards is based on the priority score awarded to each application and the recommendations of the Research Committee. Relevance of the proposed study to the ROI’s research agenda is also considered in determining awards.

1. **Scoring Proposals:**

   - Each LOI and proposal will be scored by at least two qualified reviewers.
   - No individual who is designated as the mentor of an applicant or who submits an application in response to this RFP may score applications for this RFP.
   - Applications from the same institution or organization will not be scored by members of the ROI Research Committee, subcommittee or work group from that institution or organization.

2. **Timeline:**

   - Letter of Intent due: October 28, 2019 at 5:00 p.m. ET
   - Invitation for proposal submission: November 2019
   - Proposal due: January 31, 2020 at 5:00 p.m. ET
   - Award notification: April 2020

**Other Requirements**

All grant recipients must submit an interim report to the ROI after 1 year and a final report at the end of the 2-year funding period. This timeline will be adjusted as needed if the grant period is less than 2 years. Investigators are expected to submit an abstract to present their results at an ASTRO meeting. Manuscripts should be submitted to journals with a large U.S. audience. Investigators must acknowledge ROI support on all publications and products of the project and send copies of all products to the ROI.

The ROI will review all submissions and make a determination as to whether to release the funds to the selected participant as 1) a grant pursuant to standard terms related to grants and ownership of all work product related thereto or 2) to offer the funds through a services contract which would provide the ROI with ownership and/or a broad license to the work product created through the services and contract. A participant whose project has been selected will be notified of the ROI’s choice under the above 2 scenarios and upon agreement enter into either of the appropriate relationships with the ROI.
